Heavy Metal Equipment & Rentals

Reliability and Value

Heavy Metal's reputation is built on its ability to supply reliable, good quality equipment to its customers at reasonable prices. Reliability and value – these are what we are committed to deliver to our customers

Flexibility

Heavy Metal strives to meet the particular needs of its customers and to develop commercial and technical solutions to meet those needs. We offer flexible rental and leasing arrangements for our customers. From short term rental arrangements for single machines to long term leases on a fleet of machines, we can deliver what you want, when you want it. Customers who are looking to buy rather than rent can acquire equipment from our large range of quality low-houred machines.

Knowledge

We use our industry experience and the reach of our network to deliver shared knowledge through to our customer base. Our repeat and long-term customers recognize the benefits of partnering with an equipment supply leader who understands them and their industry.

Heavy Metal Equipment flexible rental gives you control of North America's best earthmoving equipment so you can take total control of your mine. From a complete fleet to a few machines, long-term or short-term, mine with maximum agility with Heavy Metal Equipment

Mine the way you want to mine and let us look after your equipment needs. Here is how we can help:

Preserve capital

Don't allocate precious capital to mobile mining equipment or expose yourself to equipment residual value risk, leave that to us. Renting gives you the flexibility to use your capital to grow your business.

Fully maintained

You focus on the mining, we'll keep our equipment working safely, reliably and productively. Our maintenance team integrates seamlessly with your team and operation, whether onsite or through a field service arrangement.

Jointly maintained

In some instance it is mutually beneficial to have the mine service team look after the day to day maintenance, regular servicing and completing minor repairs. While Heavy Metal Equipment will take the responsibility for the major repairs and component change outs. Every rental agreement is adaptable to suit your needs and creativity is always welcomed.

Operational flexibility

You retain total operational control over the equipment so you can mine using your people, working to your safety and operational standards and your production schedules.

Scale up or down

Whether you need equipment short-term or for the life of your project, we can deliver all the equipment you need, from a few machines to a full fleet. When you rent from us you can also change fleet size and mix as your needs change from ramp up, to full production and ramp down.

Extensive fleet

We have over 350 rental machines in our North American fleet from brands such as Caterpillar, Hitachi, Deere and Komatsu. As one of the largest mining equipment rental company our fleet mix is strategically configured to meet every mining application and the needs of your project. We are always looking to add additional equipment to the fleet so if you have a specific make or model please call and we will have a discussion.

RELIEVE THE BURDEN OF EQUIPMENT UPKEEP

Everyone talks cost per tonne. But do you know what it really costs you to maintain earthmoving equipment at your operation? Not just in resources, manpower and space, but in downtime, productivity and taking your management team's focus away from your core business.

DO YOU REALLY WANT TO BE IN THE BUSINESS OF MAINTENANCE?

We can help you get back to the business of mining by delivering a maintenance solution tailored to your needs:

ONSITE MAINTENANCE WORKSHOPS

If you have the onsite facilities and a maintenance team, then you have options. You can outsource the maintenance of your entire fleet to us, outsource your non-core or ancillary equipment, or integrate our skilled mechanics with your business to cover the swings, upticks, big outages and major repairs.

OFFSITE MAINTENANCE WORKSHOP

In addition to our 20,000 sq/ft purpose built facility in Fort McKay, AB, Heavy Metal now have major rebuild facilities in Camrose and Spruce Grove also located in Alberta. We are perfectly geared to help you minimize downtime and repair costs.

FIELD SERVICE

In the event of a breakdown, every minute counts. Our quick response field service technicians and trucks are fully equipped with the mechanical skills and tools needed to perform most repairs and component change-outs independently. We know that our maintenance performance can directly impact the performance of your operation.
